BMS

Background Music System

Imagine the technology:

The BMS runs on a computer with a sound card to play background music through your existing PA system. The BMS has its own compressor and multiband digital signal processor, so there's no need to purchase expensive audio equipment. It also includes the full features of the IAP Announcement Player to store, play and manage your public address announcements.

Imagine the capacity:

The BMS stores up to 4000 music tracks — that's more music than an average radio station.

Imagine the automation:

The BMS automatically picks and plays songs and messages at any time of the day. Your studio can also upload music and messages automatically, via the Internet.

Imagine the flexibility:

Access the BMS from any computer on your network, assign songs to different day parts or choose the playing frequency of particular tracks.

For more information and a free trial version of BMS visit www.nch.com.au/bms or contact your local supplier.
