on hold messaging
system

IMS

Intelligent Messaging Software

Imagine the technology:

IMS runs on a computer with any standard sound card to play telephone on hold messages. The software runs in the background so that the computer can still be used in your office as normal.

Imagine the capacity:

The IMS supports over 100 music tracks or messages, and can store over 5 hours of high quality digital audio.

Imagine the automation:

Your studio can upload your regularly produced messages automatically, via the Internet.

Imagine the flexibility:

Schedule messages to commence and expire on certain dates or to play only on specified days of the week or at different times of the day.

For more information and a free trial version of IMS software visit www.nch.com.au/ims or contact your local supplier.
