VRS & TRx

Telephone Recording System Software

Imagine having a record:

Recording phone calls can be essential to verify conversations which are later disputed. The **VRS** or **TRx** software lets you archive your calls so they can be replayed in future.

Imagine the recording solutions:

VRS is an automatic voice or hardware activated recording software designed for multiline recording. For more simple call recording requirements, the **TRx** is a manual recorder with start, stop and hold functions - perfect for small business order-taking or credit card verifications.

Imagine the capacity:

VRS records up to 8 calls simultaneously on one computer and offers advanced audio compression to reduce file size - in fact you can record 2 years of 24/7 audio on a 32GB hard drive. Both the **VRS** and **TRx** systems give you date, time or DTMF number dialled search functions.

For more information and a free trial version of our telephone recording system software visit www.nch.com.au/vrs (VRS) or www.nch.com.au/trx (TRX) or contact your local supplier.
